SUMMARY

Full-stack developer with 2.5+ years of enterprise experience in Angular, .NET Core, SQL Server, and Azure. Proven track record in designing secure API integrations, hardening data pipelines, and automating business-critical financial workflows. Pursuing a B.Sc. in Computer Science with a growing focus on cybersecurity, secure architecture, and identity management.

PROFESSIONAL EXPERIENCE

Software Developer | TMH Solutions

April 2023 – Present

- Built full-stack enterprise features in Angular and ASP.NET Core across invoicing, project management, and financial reporting systems serving multiple business units.
- Designed secure RESTful APIs with auth and input validation, protecting financial data across 3 integrations (FreshBooks, QuickBooks Online, FactSet).
- Built and optimized T-SQL stored procedures for financial data pipelines with parameterized queries and province-based conditional logic to prevent SQL injection.
- Automated board reporting by replacing manual Excel assembly with template-driven GemBox pipelines, reducing preparation time from hours to minutes.
- Refactored batch processing to reduce database writes by ~30% per batch cycle.
- Developed a modular PDF generation pipeline across distributed services, isolating document rendering, backend transfer, and frontend delivery.
- Built contractor invoicing workflows handling time-entry approval, billing transitions, batch processing, and retainer logic, fully replacing manual preparation.
- Managed Azure cloud resources, CI/CD pipelines, and Active Directory-based identity management across production environments.

Contract Software Developer | Mivance

December 2023 – Present

- Delivered full-stack .NET Core and Angular features under contract, owning end-to-end implementation from API design through frontend integration.
- Enforced secure data access using EF Core with parameterized queries, role-scoped filtering, and least-privilege patterns across multi-tenant environments.

SELECTED PROJECTS

Contractor Invoicing & Billing Automation — Angular, ASP.NET Core, SQL Server, Azure

- Built SQL-backed invoice generation, remittance workflows, and batch processing with retainer-based billing logic, eliminating manual invoice preparation.

Board Reporting Automation Engine — C#, SQL Server, GemBox, Azure

- Replaced manual board reporting with automated template-driven pipelines, producing structured leadership-ready outputs with auditable execution.

Test Environment Replication Utility — C#, OAuth, FreshBooks API, Azure Functions

- Designed secure API-based utility for cloning FreshBooks data between environments using OAuth, enabling integration testing without production exposure.

EDUCATION

B.Sc. Computer Science (In Progress) — Seneca Polytechnic

Started September 2025

Computer Programming — High Honours — Seneca Polytechnic

April 2022

Key coursework: Database Management Systems, Object-Oriented Programming, Discrete Mathematics and Logic, Networking Fundamentals, System Analysis, Data Structures and Algorithms, System Design and Architecture, Introduction to Security, User Interface Design, Cloud Computing.
