SUMMARY

Full-stack developer with 3+ years of professional enterprise experience building and maintaining production systems in Angular, ASP.NET Core, C#, SQL Server, and Azure. Specializes in secure REST API integrations, T-SQL data pipelines, and the automation of business-critical financial and reporting workflows. Owns features end to end from database and API design through frontend delivery across invoicing, billing, and leadership-reporting systems.

TECHNICAL SKILLS

Languages: C#, TypeScript, JavaScript, SQL

Backend: ASP.NET Core, .NET Core, REST APIs, Entity Framework Core

Frontend: Angular, RxJS, HTML, CSS, Bootstrap

Database: SQL Server, T-SQL, Stored Procedures, Query Optimization

Cloud & DevOps: Azure, Azure Functions, Azure Blob Storage, CI/CD Pipelines, Active Directory

Tools & Integrations: Git, GitHub, FreshBooks API, QuickBooks Online API, FactSet API, GemBox

Security & Architecture: Authentication & Authorization, Role-Based Access Control, Input Validation, Secure API Design, Parameterized Queries

PROFESSIONAL EXPERIENCE

Software Developer | TMH Solutions

April 2023 – Present

- Develop full-stack enterprise features in Angular and ASP.NET Core across invoicing, project management, and financial reporting systems serving multiple business units.
- Designed secure RESTful APIs with authentication and input validation across three external integrations (FreshBooks, QuickBooks Online, FactSet), protecting sensitive financial data.
- Authored and optimized T-SQL stored procedures for financial data pipelines, applying parameterized queries and province-based conditional logic to enforce correctness and prevent SQL injection.
- Replaced manual Excel board-reporting assembly with template-driven GemBox pipelines, cutting report preparation from hours to minutes.
- Refactored batch processing to reduce database writes by ~30% per cycle, improving throughput and resource efficiency.
- Architected a modular PDF generation pipeline across distributed services, separating document rendering, backend transfer, and frontend delivery.
- Built contractor invoicing workflows covering time-entry approval, billing transitions, batch processing, and retainer logic, fully replacing manual preparation.
- Managed Azure resources, CI/CD pipelines, and Active Directory-based identity across production environments.

Contract Software Developer | Mivance

December 2023 – Present

- Deliver full-stack .NET Core and Angular features under contract, owning end-to-end implementation from API design through frontend integration.
- Enforced secure data access with EF Core — parameterized queries, role-scoped filtering, and least-privilege patterns — across multi-tenant environments.

SELECTED PROJECTS

FreshBooks Test-Environment Replication Utility — C#, Azure Functions, OAuth, FreshBooks API

- Built a serverless utility that clones FreshBooks account data across environments through OAuth-secured API calls, enabling safe integration testing without exposing production data.

Board Reporting Automation Engine — C#, SQL Server, GemBox

- Designed a template-driven reporting engine that assembles SQL-sourced data into structured, audit-ready leadership reports with traceable, repeatable execution.

Contractor Invoicing & Billing System — Angular, ASP.NET Core, SQL Server

- Implemented SQL-backed invoice generation with retainer-based billing logic, remittance workflows, and batch processing across the full approval-to-invoice lifecycle.

EDUCATION

Associate Degree (Computer Programming) — High Honours | Seneca Polytechnic | April 2022

Relevant coursework: Database Management Systems, Object-Oriented Programming, Data Structures & Algorithms, System Design & Architecture, Introduction to Security, Cloud Computing.
